- FigJam
- Framer
- ProtoPie
- Storybook
- Webflow
- Adobe Illustrator
- Lottie
- Miro
- Notion
- Linear
- Claude & AI tooling

Languages

English
Telugu
Hindi

Profile

A designer who works towards bridging the gap between software and the people using it. Five years in fintech and B2B SaaS have taken me from single features to owning product direction across two products and leading a team of two. I am at my best in ambiguous, systems-heavy problem spaces: finding the gaps, untangling complicated workflows, and building the systems that let a team ship consistently. I would rather ask the hard question early than design around it later.

Employment History

Senior Product Designer, Volopay, Bengaluru

OCTOBER 2021 – PRESENT

- Designed the majority of Volopay's spend management platform across web and mobile: onboarding, corporate cards, bill pay, reimbursements, approvals and accounting integrations.
- Adapted core flows for markets across APAC, each carrying its own regulatory rules and workflow expectations.
- Drove the **V1 → V2 product evolution**, rebuilding information architecture, navigation and core flows without disrupting existing customers.
- Designed the mobile app alongside web, holding parity where it mattered and diverging where the context called for it.
- Founded and own the **Fly Design System**, Volopay's Figma component library and the shared source of truth for design and engineering.
- Designed the **Policy Agent**, an AI compliance layer that reviews receipts and flags policy breaches before they reach the finance team.
- Lead a team of two designers: setting direction, running critiques, allocating work across parallel tracks and mentoring on craft.
- Partner with product and engineering from definition through release, and with growth and marketing on launch collateral.
- Run usability sessions on high-risk flows and use feedback, support themes and analytics to steer decisions.

Senior Product Designer, Oxo (Sales Outbound Platform)

2025 – PRESENT

- Designed **Oxo** from zero to launch over 1+ year, owning discovery, product definition, information architecture, interaction design and the visual language as the sole designer on the product.
- Shaped the outbound workflow end to end: prospect lists, sequence building, multi-channel outreach, inbox and reply handling, and reporting, turning a sprawling sales process into a small set of screens a rep can work out of daily.
- Built the product's UI foundations from scratch and shipped it as a standalone launch alongside the core fintech platform.

Product Design Intern, Juno, Bengaluru

AUGUST 2021 – OCTOBER 2021

- Iterated on concepts for the mobile app alongside the product team, moving from rough directions to testable flows.
- Analysed user feedback and market trends to inform design decisions, and worked with marketing on concepts that supported early user acquisition.

Education

Certification, UI/UX Design, Springboard

JUNE 2020 – JULY 2021

B.Tech, Computer Science, Vellore Institute of Technology, Chennai

JUNE 2016 – JUNE 2020
